

Healthix 30 Day Readmission Report identifies patients admitted and readmitted into the Emergency Department and into the Hospital within 30 days of their last discharge. The report views patient data across the entire network of Healthix hospitals (81 sites). These patient readmissions can result in lost reimbursement and other financial penalties for hospitals. Insights from this report can support intervention, care coordination and decision making.

Healthix 30 Day Readmission Report

Payments to hospitals are reduced if hospitals have high rates of 30-day readmissions. Healthix provides weekly or monthly reports about patient readmissions for both the Emergency Department (ED) and Inpatient hospitalizations. This provides a comprehensive view in network and outside your facilities.

The report can be used in conjunction with alerts to intervene at the point of care and minimize unnecessary readmissions. The report is sorted by MRN and delivered to Customers via SFTP.

HEALTHIX REPORTING
