

Healthix Clinical Information Update (CIU) provides complete and instant updates for your patient, client, or member base. The information is transferred from Healthix directly into the Customer's data system.

## Healthix CIU

It begins initially with a complete longitudinal file (everything Healthix and the Statewide Health Information Network of New York (SHIN-NY) has on the patient for the last 3 years). Subsequently, the service sends only a mini-CCD with incremental, updated, or new Healthix information added to the patient, client, or member record. Client consent is necessary for this service. One-to-One Exchange relationships can be leveraged to enhance data exchange, and care coordination.

- The Healthix Customer may choose to filter down the data in terms: (a) initial time frame (e.g., last 6 months), (b) which providers the data comes from, and (c) specific types of information rather than all data elements.
- The Healthix Customer can select which patient, clients or members to include by sending an enrollment/registration feed or subscription file to Healthix every 180 days. Subscription methods include all clients, or a rule-based file (based on demographics, diagnosis, etc.)
- The data is Healthix Data only. No SHIN-NY or eHealth Exchange data is contained in this service.

## HEALTHIX CIU

### One Comprehensive Patient Picture

Every time a patient has an encounter with a participating organization, data is sent to Healthix where it is collected into one comprehensive patient picture.

### DATA DELIVERY: Clinical Information Updates

Delivering real-time 24/7 patient information, with alerts and advanced updates.
