

Healthix Focus360° Empowers Federally Qualified Health Centers (FQHCs) with Value-Based Care Toolkit

Healthix is driving innovation by supporting FQHCs with an online toolkit designed to facilitate value-based care (VBC). The toolkit addresses FQHCs' top priorities, improving patient outcomes and crucial UDS/HEDIS measures. It identifies external quality measures, pinpoints high-risk patient groups, and offers real-time guidance for follow-up actions.

Healthix Focus360° provides a dashboard view, reports and analysis designed to address the priority needs of the health centers.

The dashboard specifically identifies quality measures met outside of the user's organization, patient populations at greatest risk and real-time support for prioritizing follow-up.

After a successful implementation with the FQHCs, Healthix plans to expand the toolkit to IPAs, ACOs, BHOs and CBOs. Healthix aims to support healthcare delivery for diverse patient populations.

The screenshot displays the Healthix Focus360° dashboard. At the top, the logo "HEALTHIX FOCUS 360°" is prominently featured. Below the logo, a search bar and a user profile icon for "Tom Moore" are visible. The main content area is titled "Facility Summary of Patient Data" and is divided into two columns. The left column, "PATIENT STATS", shows: Gender: 7,057 M / 11,328 F; Age Range: 1 to 107 Years; ED Visits in 30 Days: 1,213. The right column, "CONSENT", includes a note: "ONLY PATIENT WITH CONSENT WILL APPEAR IN MOST REPORTS" and lists: Total Patients: 18,400; Patients with Grant Consent: 11,392; Patients with Deny Consent: 2,906; Patients with No Consent on File: 4,102. Below these sections are seven interactive tiles: "360° View" (with a dropdown menu set to "High Utilizers"), "Unplanned Readmissions and Early Returns", "HbA1c Results", "PCP Attribution", "Population Risk Management", "Transition Risk Management", and "Quality Measures".

The Healthix Focus360° dashboard features a facility summary of patient data and seven segments by which to create in-depth reports. The dashboard is user friendly, fast and provides robust public health and patient data.

Focus360° Highlights

360° View: Lists the encounters that have occurred outside of the user's facility with filter options to define parameters.

Predictive Risk Analytics: Predictive analytics benefits from machine learning large language models leveraging the breadth of data in Healthix.

Quality Measures: Delivers data for specific HEDIS quality metrics to aid in identifying and closing gaps in care.

Features:

360° View

(Care Outside My Institution)

- All Patients
- High Utilizers
- Referral Reconciliation
- STI Encounters
- Childhood Disability Screening
- Follow-up After Hospitalization

Predictive Analytics

Population Risk

- Asthma Exacerbation
- Suicide Attempt
- COPD
- Type 2 Diabetes
- Future Cost
- IP Admissions
- ED Visits
- Mortality

Transition Risk

- IP Readmissions in 30 Days
- ED Re-visits in 30 Days

Quality Measures

Encounter-Based

- Adult and Child Well Visits
- Follow-Up After Hospitalization for Mental Illness and Substance Abuse
- Transition of Care
- Prenatal and Postpartum Care

Patient-Based

- Controlling Blood Pressure
- Breast Cancer Screening
- Cervical Cancer Screening
- Colorectal Cancer Screening
- Comprehensive Diabetes Care

Other Reports

- HbA1c
- Unplanned Readmissions and Early Returns
- PCP Attribution
