Healthix

Healthix Concise places HIE information within a clinician's workflow to assist in making informed clinical decisions. It is a FHIR-based app intended to be used by physicians and the patient care team at the point of care. Access to Concise is based on your organization's designation of your role and scope of care.

Concise is Available through your Electronic Health Record (EHR) Systems

The Concise app is now available through your electronic health record systems such as Epic, eCW, Cerner and athenahealth. Healthix Concise will link to data housed in Healthix. When a nurse, doctor, or care team member launches their EHR, the Healthix Concise app will automatically launch within the user interface, keeping the user in their workflow without the need to navigate outside their native electronic health record.
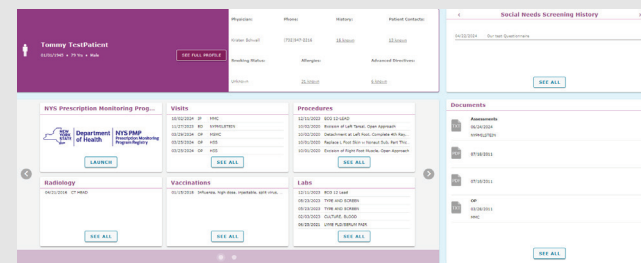

Data in Healthix Concise app

As the user pulls up a patient's chart, that action automatically launches the Healthix Concise app and passes patient data from Healthix. If there is no consent or available data, the app's patient window will appear empty. The app allows you to filter and drill down into specific clinical data such as diagnoses, labs, procedures, etc. Information in Healthix Concise comes from across all organizations in Healthix and includes:
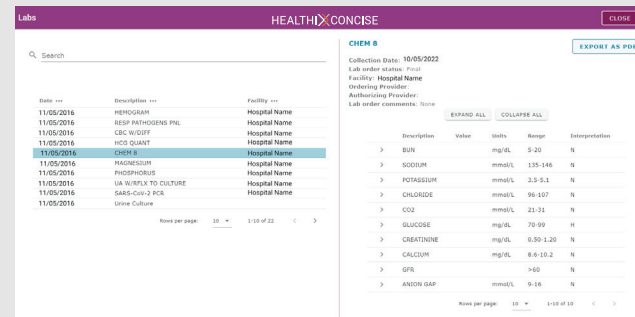

Clinical Data		
• Encounters	• Health Records	
	– Procedures	– Vaccinations
	– Radiology	– Laboratory
	– Conditions	– Medications

The Concise app automatically launches in the EHR window and passes patient data from Healthix.

Note: SDoH Data and NYS Prescription Monitoring Program are optional tiles.

DATA RETRIEVAL: CONCISE
Patient health records, CCDs, CCDAs, summaries and more

HEALTHIX CONCISE

Benefits

- The app displays a priority subset of information concisely, unlike a full history found in a CCD or EHR.
- Available in real time, 24/7, through your EHR workflow (no additional patient search or login necessary).
- Provides data from across New York and Long Island for all participating organizations in Healthix, including 80+ hospitals, thousands of ambulatory facilities, labs, radiology centers and more.
- Healthix matches the patient records across all facilities into one master patient record, and then presents a composite picture for the specified data elements for everything outside your organization's data.
- Enables seamless access from within the EHR.

Healthix Concise

Healthix Concise adheres to a variety of established and emerging interoperability standards, including:

- Consolidated Clinical Document Architecture (C-CDA)
- Fast Healthcare Interoperability Resources (FHIR Specification)
- Trusted Exchange Framework and Common Agreement (TEFCA)

Use Case Scenarios

To look at recent labs done on a patient outside of the user's organization to quickly assess the patient's condition and also avoid redundant testing.

To access discharge/transfer summaries from other facilities to help with transitions of care process.

To allow a practitioner viewing a patient's chart to view additional information concerning an encounter.
