

Healthix Focus360° Empowers Organizations with Value-Based Care Toolkit

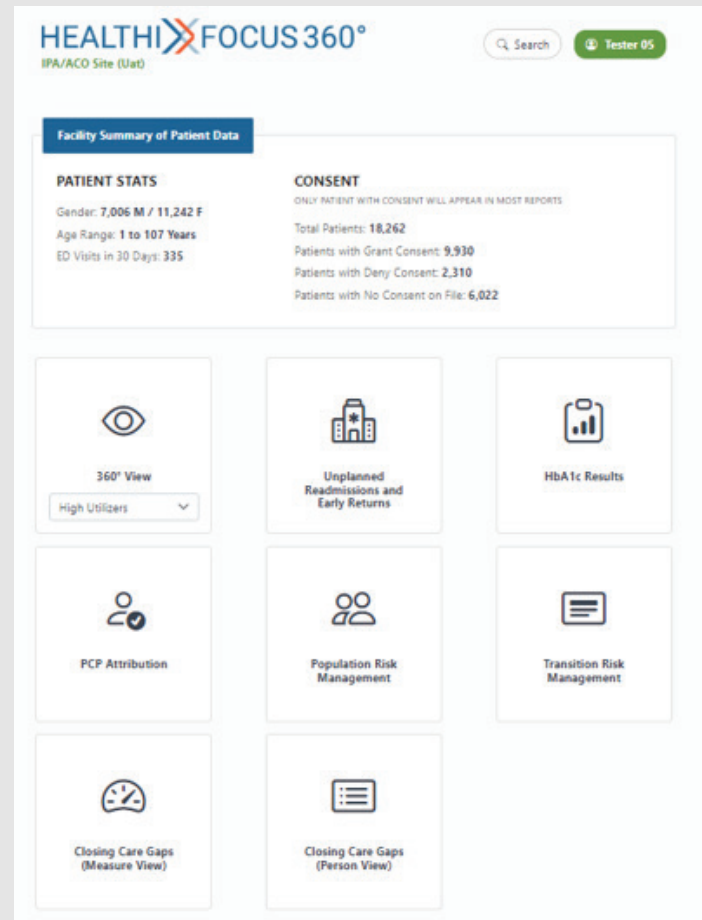

Healthix is driving innovation by supporting Accountable Care Organizations (ACOs), Behavioral Health Organizations (BHOs), Community-Based Organizations (CBOs), Federally Qualified Health Centers (FQHCs), and Independent Physician Associations (IPAs) with an online toolkit designed to facilitate value-based care (VBC).

The toolkit addresses each market segment's top priorities, improving patient outcomes and critical UDS/HEDIS measures. It identifies external quality metrics, pinpoints high-risk patient groups, and offers real-time guidance for follow-up actions.

Healthix Focus360° provides a dashboard view, along with reports and analyses, to meet the priority needs of organizations. The dashboard specifically highlights quality measures achieved outside the user's organization, identifies patient populations at greatest risk, and offers real-time support for prioritizing follow-up actions.

The Healthix Focus360° toolkit is designed to support ACOs, BHOs, CBOs, FQHCs, and IPAs, aiming to improve healthcare delivery for diverse patient populations.

HEALTHIX FOCUS 360°

The Healthix Focus360° dashboard features a facility summary of patient data and eight segments by which to create in-depth reports. The dashboard is user friendly, fast and provides robust public health and patient data.

Focus360° Highlights

360° View: Lists the encounters that have occurred outside of the user's facility with filter options to define parameters.

Predictive Risk Analytics: Predictive analytics benefits from machine learning large language models leveraging the breadth of data in Healthix.

Quality Measures: Delivers data for specific HEDIS quality metrics to aid in identifying and closing gaps in care.

Features:

360° View

(Care Outside My Institution)

- All Patients
- High Utilizers
- Referral Reconciliation
- STI Encounters
- Childhood Disability Screening
- Follow-up After Hospitalization

Predictive Analytics

Population Risk

- Asthma Exacerbation
- Suicide Attempt
- COPD
- Type 2 Diabetes
- Future Cost
- IP Admissions
- ED Visits
- Mortality

Transition Risk

- IP Readmissions in 30 Days
- ED Re-visits in 30 Days

Closing Care Gaps

Encounter-Based

- Adult and Child Well Visits
- Follow-Up After Hospitalization for Mental Illness and Substance Abuse
- Transition of Care
- Prenatal and Postpartum Care

Patient-Based

- Controlling Blood Pressure
- Breast Cancer Screening
- Cervical Cancer Screening
- Colorectal Cancer Screening
- Comprehensive Diabetes Care

Other Reports

- HbA1c
- Unplanned Readmissions and Early Returns
- PCP Attribution
